Ashish Chauhan

Tech Lead — Backend & Platform Engineering, Fraud, Risk & RegTech Systems

Ahmedabad, India • ashishchauhan28802@gmail.com • +91 8000001378 • ashishchauhan.site • linkedin.com/in/ashishchauhan • github.com/ashishchauhan

Summary

Tech Lead with **3 years** of experience architecting and delivering large-scale backend platforms for the Indian banking sector. Led a **10-engineer team** on an approximately INR 25 crore, 3-year government-sponsored fraud/AML platform (EWS + FAME) deployed across 4,500+ branches and 9 Regional Rural Banks, flagging approximately 500 fraudulent accounts and cutting alert latency by 40% through an ML-augmented rules engine. Built a complete RBAC system and a no-code/low-code rule-and-workflow builder from scratch, letting bank teams self-configure logic without engineering releases.

Key Achievements

Improved Alert Latency

Led a 10-engineer team, reducing alert latency by 40% across 4,500+ branches.

Fraud Detection at Scale

Deployed EWS across 9 RRBs, flagging approximately 500 fraudulent accounts with AI/ML.

High-Throughput Data Platform

Built UDIP, processing 5-6GB of banking data per day for air-gapped deployments.

Query Performance Optimization

Cut concurrent-user query response times by approximately 85% at large banks.

Experience

SSB Digital Pvt Ltd, Ahmedabad

Feb 2024 – Present

Software Developer (Feb 2024–Apr 2025) → Tech Lead (May 2025–Present)

Stack: Java, Spring Boot, Spring Security, MySQL, PostgreSQL, Oracle, Redis, WebSockets, Spring Batch, Docker, Microservices

Flagship contract: **approximately INR 25 crore**, 3-year government-sponsored fraud/AML platform across **4,500+ branches**, **9 Regional Rural Banks** — two products (EWS, FAME) plus the shared UDIP backbone. Both EWS and FAME shipped to production in **approximately 3 months each**, with fast UAT turnaround.

EWS — Fraud Early-Warning System

- Built a real-time rules and threshold engine; flagged **approximately 500 fraudulent accounts** and cut alert latency by **40%** through iterative production tuning.
- Designed and built an **AI/ML-based risk-scoring layer** augmenting the static rules engine with model-driven fraud risk prediction.
- Integrated with Core Banking Systems via an ETL pipeline (Spring Batch) to generate RBI-compliant alerts in real time (Redis caching + WebSockets).
- Optimized EWS for concurrent users with Redis caching and query tuning, cutting response times from **approximately 8-9 seconds to milliseconds (~85% faster)** at larger banks.

FAME — Money-Mule, MNRL & FRI Reporting

- Built the **money-mule detection module** and consolidated **MNRL** and **FRI** regulatory reporting into the same FAME platform.
- Built a **no-code/low-code rule-and-workflow builder**, letting bank operations teams self-configure business logic without a dev release cycle.
- Designed and built a complete **RBAC system** from scratch, reused across both products and later repurposed for an unrelated AI knowledge-management tender.

UDIP — Data Ingestion Platform

- Designed and led a **high-throughput, offline-first data ingestion platform** handling **5-6GB text files / millions of records per day** for air-gapped deployments.

ECL — Credit-Risk Suite

- Designed and built a credit-risk suite end-to-end (PD/LGD/EAD-based **Expected Credit Loss** calculator with **CRAR** attribution and credit-guarantee tracking), validated against the solution design doc's worked example.

Other Platforms

- Designed full backend architecture solo for a litigation-tracking system with real-time WebSocket notifications.
- Built an asset-tracking and post-loan-monitoring system with automated SMA/NPA status reporting.

ConceptServe Technology, Ahmedabad — Software Developer

May 2023 – Dec 2023

Stack: Spring Boot, Java, MySQL, JWT, Microservices

- Enhanced a Parking Management System for Ahmedabad Airport — **improving alert response time by 20%** and increasing user satisfaction.
- Built a VIP visitor management system for a temple deployment: RFID-based enrollment with a live VIP-count dashboard.
- Built a secure, scalable microservices-based intelligent traffic-control system with JWT + OTP-verified access.

Skills

BACKEND & INFRASTRUCTURE

Java | Spring Boot | Spring Security | Microservices | gRPC | WebSocket | Docker | Redis

DATA & AI/ML

MySQL | PostgreSQL | Oracle | MongoDB | Python | ML Risk Scoring

DOMAIN & LEADERSHIP

Fraud Detection | AML Compliance | RBI Regulatory Compliance | RBAC Design | Credit Risk Modeling | 10-Engineer Team Leadership

Education

B.Tech, Computer Science & Engineering, Minor in Design — Ahmedabad University, Aug 2020–May 2024

Additional

Cinematographer/video editor — 2nd prize for a documentary at Nirma University on Ahmedabad's culture and architecture.
Languages: English, Hindi, Gujarati.
