PLATFORM AT SCALE

₹25Cr
3-YR GOVT-SPONSORED CONTRACT

4,500+
BANK BRANCHES, 9 RRBS

500+
FRAUD ACCOUNTS FLAGGED

40%
ALERT-LATENCY REDUCTION

SKILLS

Java · Spring Boot · Spring Security · Microservices · MySQL · PostgreSQL · Oracle · Redis · WebSockets · Docker · Python/ML · RBAC

EDUCATION

B.Tech, CSE + Minor in Design
Ahmedabad University
Aug 2020–May 2024

ADDITIONAL

Cinematographer/video editor — 2nd prize, Nirma University documentary on Ahmedabad's culture & architecture.

English · Hindi · Gujarati

ASHISH CHAUHAN

Tech Lead — Fraud, Risk & RegTech Platform Engineering

SUMMARY

Tech Lead with 3 years of experience architecting and delivering large-scale backend platforms for the Indian banking sector. Led a 10-engineer team on a ~₹25 crore, 3-year government-sponsored fraud/AML platform (EWS + FAME) deployed across 4,500+ branches and 9 Regional Rural Banks, cutting alert latency by 40% through an ML-augmented rules engine. Built a complete RBAC system and a no-code/low-code rule-and-workflow builder from scratch, letting bank teams self-configure logic without engineering releases.

EXPERIENCE

SSB Digital Pvt Ltd, Ahmedabad — 2024–Present

Tech Lead (May 2025–Present) · Software Developer (Feb 2024–Apr 2025)

Java, Spring Boot, Spring Security, MySQL, PostgreSQL, Oracle, Redis, WebSockets, Spring Batch, Docker, Microservices

- Led backend architecture and delivery for a ~₹25 crore, 3-year government-sponsored fraud/AML platform (rural-banking fraud early-warning + money-mule detection) across 4,500+ branches spanning 9 RRBs; priced per-branch, month-to-month, across two flagship products.
- Flagged ~500 fraudulent/suspicious accounts and cut alert latency by 40% through iterative tuning of a real-time rules and threshold engine in production.
- Designed and built an AI/ML-based risk-scoring layer augmenting the static rules engine with model-driven fraud risk prediction.
- Designed and built a complete Role-Based Access Control (RBAC) system from scratch, used across both flagship products.
- Built a no-code/low-code rule-and-workflow builder, letting bank operations teams self-configure business logic without a dev release cycle.
- Integrated with Core Banking Systems (CBS) via an ETL pipeline (Spring Batch) to ingest daily transactions and generate RBI-compliant alerts in real time (Redis caching + WebSockets).
- Designed and led a high-throughput, offline-first data ingestion platform handling 5–6GB text files / millions of records per day for air-gapped deployments — the shared ingestion backbone feeding both flagship products.
- Designed and built a credit-risk suite end-to-end (PD/LGD/EAD-based ECL calculator with audit logging, CRAR attribution, credit-guarantee-scheme tracking), validated to within ₹2 of the solution design doc's worked example.
- Architected the platform for reusability — the same RBAC/workflow/document-generation infrastructure was repurposed for an unrelated AI knowledge-management tender.
- Designed full backend architecture solo for a litigation-tracking system: hierarchical departments, dynamic branch/role management, super-admin permissions, real-time WebSocket notifications.
- Built an asset-tracking and post-loan-monitoring system: Spring Batch loading into an H2 cache layer, REST APIs, dynamic reports, scheduled SMA/NPA automation.

ConceptServe Technology, Ahmedabad — 2023

Software Developer · May 2023–Dec 2023

Spring Boot, Java, MySQL, JWT, Microservices

- Enhanced a Parking Management System for Ahmedabad Airport: REST APIs, automated email alerts, dynamic collection charts, automated SMS, operator short-voucher module, fixed recurring MySQL connection issues.
- Built a VIP visitor management system for a temple deployment: RFID-based enrollment/verification with a live VIP-count dashboard.
- Built a secure, scalable microservices-based intelligent traffic-control system with JWT + OTP-verified data access.
