PLATFORM AT SCALE

$1.8M
3-YR GOVT-SPONSORED CONTRACT

4,500+
BANK BRANCHES, NATIONAL NETWORK

500+
FRAUD ACCOUNTS FLAGGED

40%
ALERT-LATENCY REDUCTION

SKILLS

Java · Spring Boot · Spring Security · Microservices · MySQL · PostgreSQL · Oracle · Redis · WebSockets · Docker · Python/ML · RBAC

EDUCATION

B.Tech, CSE + Minor in Design
Ahmedabad University
Aug 2020–May 2024

ADDITIONAL

Cinematographer/video editor — 2nd prize, university documentary on urban culture & architecture.

English · Hindi · Gujarati

Targeting UAE, Singapore & other strong RegTech markets, or fully remote.

ASHISH CHAUHAN

Tech Lead — Fraud, Risk & RegTech Platform Engineering

SUMMARY

Tech Lead with 3 years of experience architecting and delivering large-scale backend platforms for the banking sector. Led a 10-engineer team on a ~$1.8M USD, 3-year government-sponsored fraud/AML platform deployed across 4,500+ branches of a government-backed rural banking network, cutting alert latency by 40% through an ML-augmented rules engine. Built a complete RBAC system and a no-code/low-code rule-and-workflow builder from scratch, letting operations teams self-configure logic without engineering releases. Open to relocation and visa sponsorship for backend/platform leadership roles in fraud, risk, and regulatory-technology products.

EXPERIENCE

SSB Digital Pvt Ltd — 2024–Present

Tech Lead (May 2025–Present) · Software Developer (Feb 2024–Apr 2025)

Java, Spring Boot, Spring Security, MySQL, PostgreSQL, Oracle, Redis, WebSockets, Spring Batch, Docker, Microservices

- Led backend architecture and delivery for a ~$1.8M USD, 3-year government-sponsored fraud/AML platform deployed across 4,500+ branches of a government-backed rural banking network; priced per-branch, month-to-month, across two flagship products.
- Flagged ~500 fraudulent/suspicious accounts and cut alert latency by 40% through iterative tuning of a real-time rules and threshold engine in production.
- Designed and built an AI/ML-based risk-scoring layer augmenting the static rules engine with model-driven fraud risk prediction.
- Designed and built a complete Role-Based Access Control (RBAC) system from scratch, used across both flagship products.
- Built a no-code/low-code rule-and-workflow builder, letting operations teams self-configure business logic without a dev release cycle.
- Integrated with core banking systems via an ETL pipeline (Spring Batch) to ingest daily transactions and generate compliance alerts in real time (Redis caching + WebSockets), coordinated with national cybercrime/financial-intelligence reporting requirements.
- Designed and led a high-throughput, offline-first data ingestion platform handling 5–6GB text files / millions of records per day for air-gapped deployments — the shared ingestion backbone feeding both flagship products.
- Designed and built a credit-risk suite end-to-end (PD/LGD/EAD-based ECL calculator with audit logging, capital-adequacy attribution, credit-guarantee-scheme tracking), validated to within $0.02 of the solution design doc's worked example.
- Architected the platform for reusability — the same RBAC/workflow/document-generation infrastructure was repurposed for an unrelated AI knowledge-management engagement.
- Designed full backend architecture solo for a litigation-tracking system: hierarchical departments, dynamic branch/role management, super-admin permissions, real-time WebSocket notifications.
- Built an asset-tracking and post-loan-monitoring system: Spring Batch loading into an H2 cache layer, REST APIs, dynamic reports, scheduled delinquency/asset-status automation.

ConceptServe Technology — 2023

Software Developer · May 2023–Dec 2023

Spring Boot, Java, MySQL, JWT, Microservices

- Enhanced an airport parking-management system: REST APIs, automated incident alerting, dynamic reporting, automated SMS, resolved recurring database connection issues.
- Built a VIP visitor-management system for a large public venue: RFID-based enrollment/verification with a live dashboard.
- Built a secure, scalable microservices-based intelligent traffic-control system with JWT + OTP-verified access.
